Anti glare panel in black

Overall finish is natural metal and aluminium on the fabric surfaces. Front and rear faces on propeller blades are black with yellow tips. It is likely the propeller hub was either red or black. No wing walk stripes are evident. Wing insignia on underside in same position as top of wing.

It is uncertain what particular door configuration was applied (if any) on the port side. It is known to have had the passenger door on the starboard side.

Note: It is likely the fuselage stripes wrapped all the way round the nose. It is recommended that this stripe be masked and painted from the crew emergency door as a decal would not easily conform to the sharp radius of the nose.
