

Complete decals for:**Aero 45****T-28****Suggested subjects:**

MiG-17, MiG-19, MiG-21

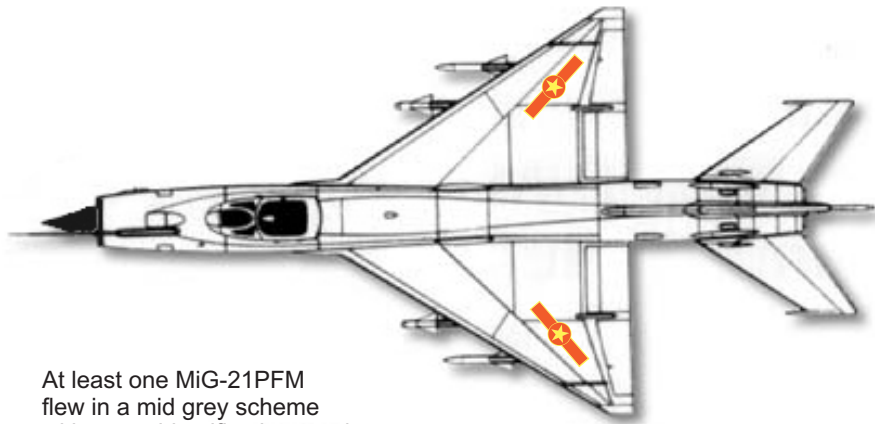

and F-5

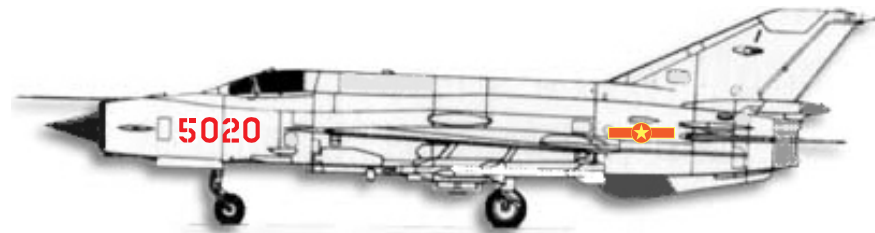

Vietnam Peoples Air Force 1963 to 1975

This sheet is designed to provide virtually all the appropriate VPAF insignia for 1/72 scale subjects. Complete decals are provided for Aero Ae45 and T-28 Trojan. Some supplementary decals may be required for other suggested subjects. The 'suggested subjects' below are typical of aircraft flown; many other scheme options are possible.

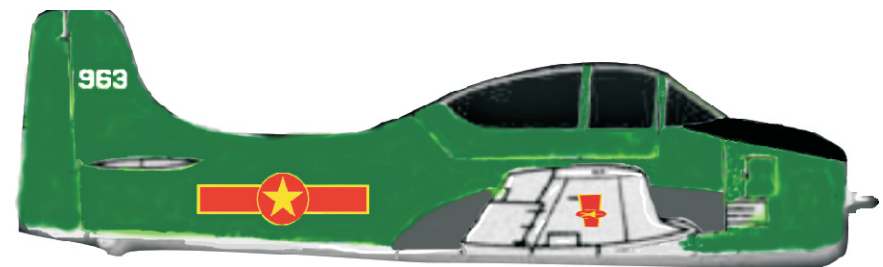

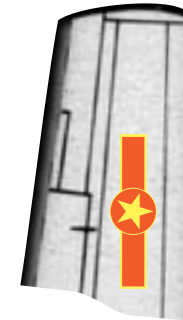

At least one MiG-21PFM flew in a mid grey scheme without an identification number.

**MiG-21PFM Number '5020'**

This aircraft was natural metal with the inlet cone and leading edge of inlet being black. The first half of the rear under-side strake was black or dark grey. Numbering is not supplied on this sheet but is generally available with Eastern Bloc air force MiG kits, alternatively, dedicated number sheets should be used.

It is evident that the camouflaging of this aircraft was done in a crude way. This aircraft scored the first VPAF air to air victory. (Underside of wing shown)

**T-28 Trojan "963"**

This aircraft was originally light aircraft grey. After capture by the VPAF, all top surfaces were over painted dark green or drab green. The black anti glare panel was retained. Insignia on all wings, top and bottom. '963' on the tail fin.
